## Important Update - Solenoid Coil Product Design

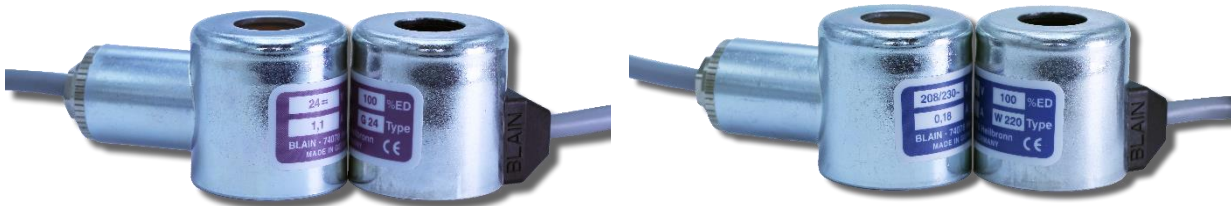

Dear customer,

We are reaching out to inform you about a recent update regarding our solenoid coil product design at Blain.

In our ongoing commitment to quality and innovation, we have made an optical change to the design of our solenoid coils. This update has been carefully implemented to streamline production processes and enhance overall product design. It's essential to emphasize that this change maintains the exact dimensions of the previous variant, ensuring seamless integration into your existing systems.

The update is only optical for a more compact solution and does not impact the functionality or performance of the solenoid coils. They will continue to operate reliably and effectively as before.

It's important to note that the new variant will only be available in select voltages, and the previous variant will still be supplied for some considerable period during the transition period. This ensures that our customers have ample time to adapt to the change, especially if specific voltage requirements are needed for your applications.

Should you have any questions or require further clarification regarding this update, please do not hesitate to contact our dedicated customer support team. We are here to assist you every step of the way.

Thank you for your continued trust and partnership with Blain. We remain committed to providing you with high-quality products and exceptional service.

Best regards

Research & Development Team  
Blain Hydraulics GmbH
