

BLAIN VALVES FOR HYDRAULIC ELEVATORS

Excellence in Simplicity and Performance

INFORMATION NOTE

Polymer DS disc

07.08.2024

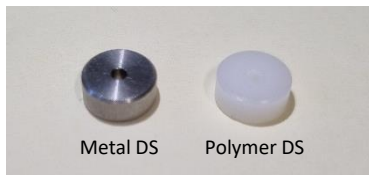

Dear Blain Customer,

Blain Hydraulics has been continuously conducting R&D to improve quality and reliability of its products.

In order to make our products more resilient against highly contaminated hydraulic fluid, Blain Hydraulics has developed a polymer DS disc. The polymer DS disc offers improved durability and performance against internal leakage, ensuring that our products continue to meet the high standards of reliability and efficiency that our customers expect. The polymer discs have been used in Blain products since January 2024.

At Blain Hydraulics, we are dedicated to providing innovative solutions to enhance your experience with our products. We welcome any feedback or questions you might have about this improvement. Our team is here to assist you with any inquiries.

Below, you will find pictures of the metal and polymer discs.

Yours sincerely

A handwritten signature in blue ink, appearing to read 'Anja Blain', with a long horizontal flourish extending to the right.
